The PV-100

- Controls**
- Blur Width
 - Sharpness
 - Noise
 - Detail
 - Contrast
 - Background

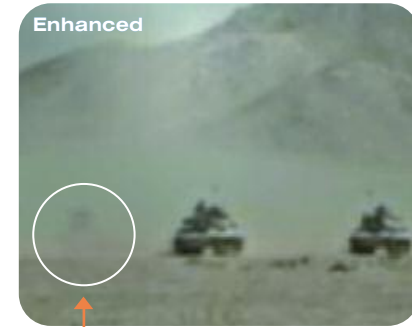

- Features**
- NTSC Color / RS-170 Monochrome
 - 1.5 to 2x Resolution Boost
 - Noise Reduced by up to 6x
 - Optimal, Spatially Adaptive Contrast Enhancement
 - 110 VAC / 220 VAC
 - Input: 1 Composite / 1 S-video
 - Output: 1 Composite, / 2 S-video
 - Contact us for Customization

When accurate imagery is essential, choose PixonVision. The clear solution in image enhancement technology.

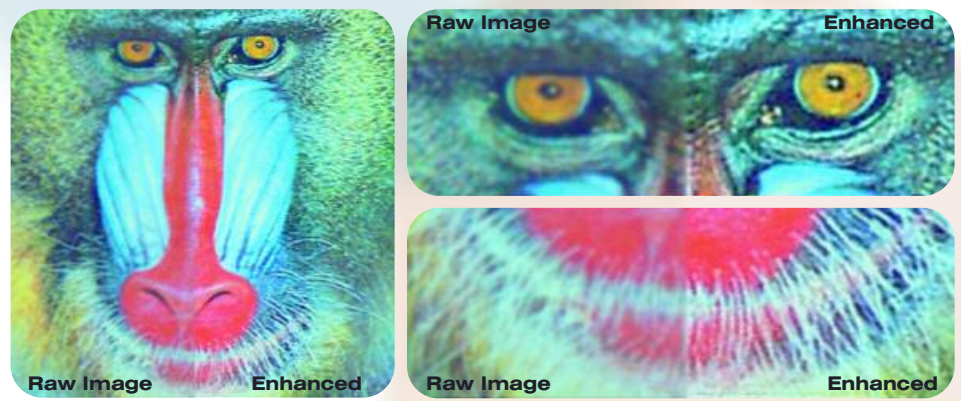

The PV-100 enhances clarity and detail, as if objects were twice as close. Noise reduction and object visibility are dramatically extended, even under dawn and dusk conditions. Glare, haze, and deep shadows are eliminated, revealing features otherwise invisible to the human eye.

The PV-100's unmatched, real-time video enhancement offers a suite of features in full color (or monochrome), including: sharpening, noise reduction, and contrast enhancement. All the enhancements are adaptive, changing automatically from one part of the image to the next, depending on image content. All processing is done in real time, on a frame-by-frame basis, at 30 frames per second.

See the PV-100's dramatic results in your own images. Contact us for a demonstration. We'll show you why PixonVision technology is the solution for you.

Notice the third tank? Only with PixonVision can you recover vital information - information that makes a world of difference to you, and to those who rely on your imaging.

Your image. Our technology.
